SUMMARY

Senior Android Engineer with **10+ years of experience** specializing in platform architecture, media systems, and performance engineering for large-scale mobile applications. Proven track record of owning critical app subsystems (video/audio, CI/CD, startup performance) used by millions of users. Strong focus on system reliability, developer productivity, and cross-platform engineering across Android, Kotlin Multiplatform, and React Native. Experienced in driving measurable improvements in crash rate, build performance, and app startup latency in production systems.

TECHNICAL SKILLS

- **Programming Languages:** Kotlin, Java, JavaScript, XML
- **Mobile Development:** Android SDK, Jetpack (Compose, ViewModel, LiveData, Navigation, DataStore), Kotlin Coroutines, RxJava, Room, ExoPlayer, Media3, Kotlin Multiplatform (KMM), Multi-module Architecture, Security Programming
- **Architecture & Design:** Android platform architecture, scalable mobile systems, MVVM, Clean Architecture, SOLID, OOP, Design Patterns (Facade, Singleton, Factory)
- **Systems & Performance:** CI/CD, performance optimization, cold start optimization, caching strategies
- **Dependency Injection:** Dagger, Dagger-Hilt, Koin
- **Networking & APIs:** Retrofit, Apollo GraphQL, RESTful APIs, Google APIs, HTTP
- **Testing:** JUnit4, JUnit5, Mockk, Espresso UI Testing, Appium, WebDriverIO
- **CI/CD & DevOps:** GitHub Actions, Bitrise, Git, Gradle
- **Cross-platform:** Kotlin Multiplatform (KMM), React Native
- **Tools & Platforms:** Android Studio, Firebase, RevenueCat, Figma, Amplitude, SauceLab, JIRA, Confluence
- **AI/Dev Tools:** Claude (AI-assisted development workflows)

PROFESSIONAL EXPERIENCE

MINDVALLEY — Kuala Lumpur, Malaysia

Senior Android Engineer (2023–Present)

Android Engineer (2020–2023)

- Owned core Android platform components including media playback, performance infrastructure, and build optimization systems used across multiple high-traffic applications.
- Led Android platform development for high-traffic applications serving millions of users, focusing on performance, scalability, and reliability across core product experiences
- Re-architected video and audio playback systems using **ExoPlayer + Media3**, introducing reusable media libraries, downloads, and advanced playback controls, significantly improving stability on low-end devices
- Improved crash-free sessions from **97% to 99.6%** by stabilizing high-risk modules, improving unit test coverage, and strengthening error handling
- Reduced app cold start time by **30%** using Baseline Profiles and startup optimization strategies
- Integrated **Jetpack Compose** into production features, improving UI development efficiency and maintainability through reusable composables
- Optimized CI/CD pipelines using **Bitrise and GitHub Actions**, reducing build times by **15%** via caching strategies and automated quality gates (Ktlint, Danger)
- Built Kotlin Multiplatform (KMM) proof-of-concept enabling shared user account functionality across Android and iOS
- Supported cross-platform initiatives (React Native, Next.js integrations) for product expansion and system interoperability
- Introduced AI-assisted engineering workflows using **Claude**, improving development velocity and standardizing Android best practices across the team

- Mentored junior engineers and contributed to engineering standards, improving team productivity and code quality

RAPID VALUE SOLUTIONS (Acquired by Aspire Systems) — Kerala, India

Software Developer (2019–2020)

- Worked on **Falabella** e-commerce application improving performance and feature stability
- Re-engineered login and registration modules using MVVM, improving performance by 15% and reducing ANR issues
- Migrated dependency injection from Dagger to Koin, improving developer productivity by 50%

ENTRI — Kerala, India

Product Engineer (Android) (2019)

- Developed Android features for exam preparation and community learning platforms
- Built scalable features using MVVM architecture and modular design
- Improved app stability through unit testing and collaboration with product/design teams

2BASE TECHNOLOGIES — Kerala, India

Software Developer (2017–2019)

- Developed and maintained Android applications in agile teams
- Focused on scalable and maintainable code practices

NOTABLE PROJECTS & APPS

- [Mindvalley App](#) (1M+ downloads) - Core platform development and performance optimization
- [Falabella App](#) (5M+ downloads) - Feature improvements and performance enhancements
- [Entri App](#) (5M+ downloads) - Feature development and maintenance

EDUCATION

College of Applied Science, IHRD — University of Calicut, Kerala, India

- BSc Computer Science (Minor: Mathematics, Electronics) | 2013–2016
- College Chairman (2015–2016) • Placement Director

CERTIFICATIONS

- Certified Professional Android Developer — [MindOrks](#) (2020)
- Android Developer Nanodegree Scholar — Google/Udacity (2017)
